

Melissa,

Good morning, I'm sending you a short summary of the steps we need to accomplish this week.

These integrated marketing communication tools in our stack all require setup and integration. I've established GHL acct, and am completing a webinar onboarding for their set up now. The Twilio number will be created and the "Lead Connector" module in GHL will connect to the SalesCloser AI agents.

Here's the GHL Foundational Setup:

1. Generate New Leads with a High-Converting Funnel

Set up your first funnel and lead-capture form to begin collecting new contacts and growing your audience.
(sample created)

2. Create a New Contact

Add at least one contact manually to activate your CRM and begin engagement workflows.

(Create one for you)

3. Import All Existing Contacts

Bring in contacts from other platforms so all outreach, automation, and segmentation can happen in one place.
(Purchase some leads from a source and do some market research / Let's Discuss)

4. Set Up Multi-Channel Communication

Connect your email, SMS, and phone services so you can send messages, receive replies, and automate follow-ups. (Twilio and WhatsApp and create new emails for outbound)

5. Launch Your First Email Campaign

Design and send an email broadcast to your audience to drive engagement and begin nurturing relationships.
(Send to me and Larry)

6. Create Automated Drip Campaigns

Build email and SMS sequences that nurture leads over time without manual effort.

(TBD based off of EmberTribe Intake and foundational launch plan)

7. Set Up Automated Appointment Scheduling

Configure your calendar, booking page, and reminder system to reduce no-shows and increase scheduled calls. (Work on this together / sync)

8. Build and Organize our Sales Pipeline

Create pipeline stages, add deals, and automate follow-ups so every lead is tracked and nothing slips through the cracks. (We will coordinate this. Since we are SaaS/Membership software subscription model, we only need a few stages of funnel based on the source, (organic, paid, webinar invite vs attendee, and target = Suspect, prospect, Freemium, Nurturing, Paid, renewal, etc.)

A fully operational foundation where:

- Leads flow into our system
- Contacts are centralized
- Messaging channels are connected
- Campaigns and automations run in the background
- Appointments book themselves
- Sales opportunities are tracked end-to-end

Please share with your team. I'm sure your methods and naming conventions are similar, but these align with GHL processes. Thanks.

Best Wishes,

Matthew Weisensee
